

# Battery Recycling

Alpha Battery Recycling Services

**Alpha Technologies is pleased to provide customers a complete Battery Service Program, combining industry leading battery technology with complete battery recycling services.**

Alpha offers initial batteries with purchase of new power systems, replacement batteries to ensure on-going network reliability and comprehensive battery recycling services. Batteries must be prepared according to the following standards in order to comply with DOT regulations regarding hazardous material transportation.

## Procedure for Battery Removal Services:

1. Prepare pallet by placing layer of cardboard on which old batteries will rest.
2. Place up to 18 batteries on first layer of cardboard.
3. Place a layer of waferboard\* on top of the batteries allowing (in the case of flag-terminal batteries) the posts to puncture the waferboard.
4. Up to another 18 batteries may be placed on top of the waferboard.
5. Place a final layer of cardboard on top of the second layer of batteries to protect the battery terminals.
6. Pallet and batteries must be shrink-wrapped for transportation
7. Contact your Alpha Representative to schedule pick-up of old batteries intended for recycling.

*\* Waferboard is a cardboard-like product approximately 1.5" thick that provides more shock absorption than traditional cardboard. This allows the 2nd tier of batteries to be stacked safely and easily.*
